

Print out these four pages using the printing option "no adjustment".

Stick the pages together ensuring that the control field in the middle has the dimension of 10 x 10 cm / 3.9 x 3.9 inches. If your printer prints up to the edge you will see a little circle with a cross.

Now stick your actual pattern together exactly the same way as the test print.

(In case your printer does not print right up to the edge you will realise this by looking at the little circle with the cross which hasn't been printed completely. You will only see the outer edge of the circle. Subsequently the lines of your pattern won't reach up to the edge, meaning that you must combine them with a pen / pencil or the like. If you look at the pattern overview on your monitor, you will see that the pattern lines are constant lines.)

control square

10x10cm /

3.9 x 3.9 inches

If necessary join the lines

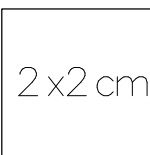

If possible always print the pattern in colour. If you print it in black— and— white the lines are not as visible as the coloured ones.

Some patterns are in the landscape format others in portrait. Therefore please check, whether the printing option "auto—matic rotation and centring" is activated.

Your pattern is featured as follows: rows (horizontal) and columns (vertical). This allows for a better overview.

## IMPORTANT!!!!

It is crucial that you use "Adobe Acrobat Reader" to open our patterns. This is a free software, which you can download out of the internet. Other PDF readers are not suitable.

0.79 x 0.79 inches
