

Barton skiff

15ft 4in, by 4ft 8in

Simple, low powered stitch and glue outboard skiff designed for no more than 4-5hp. It's intended to be semi-planing, faster than a pure displacement boat but still a fuel efficient design for our troubled times. The designer is not a qualified naval architect and this design should be regarded as experimental. No claim is made for its performance or safety. The designer accepts no responsibility for any accident or loss that may be incurred during building or while the boat is in use.
