

# DECADE COUNTER; DIVIDE-BY-TWELVE COUNTER; 4-BIT BINARY COUNTER

The SN54/74LS90, SN54/74LS92 and SN54/74LS93 are high-speed 4-bit ripple type counters partitioned into two sections. Each counter has a divide-by-two section and either a divide-by-five (LS90), divide-by-six (LS92) or divide-by-eight (LS93) section which are triggered by a HIGH-to-LOW transition on the clock inputs. Each section can be used separately or tied together (Q to  $\overline{CP}$ ) to form BCD, bi-quinary, modulo-12, or modulo-16 counters. All of the counters have a 2-input gated Master Reset (Clear), and the LS90 also has a 2-input gated Master Set (Preset 9).

- Low Power Consumption . . . Typically 45 mW
- High Count Rates . . . Typically 42 MHz
- Choice of Counting Modes . . . BCD, Bi-Quinary, Divide-by-Twelve, Binary
- Input Clamp Diodes Limit High Speed Termination Effects

## PIN NAMES

		LOADING (Note a)	
		HIGH	LOW
$\overline{CP}_0$	Clock (Active LOW going edge) Input to $\div 2$ Section	0.5 U.L.	1.5 U.L.
$\overline{CP}_1$	Clock (Active LOW going edge) Input to $\div 5$ Section (LS90), $\div 6$ Section (LS92)	0.5 U.L.	2.0 U.L.
$\overline{CP}_1$	Clock (Active LOW going edge) Input to $\div 8$ Section (LS93)	0.5 U.L.	1.0 U.L.
MR <sub>1</sub> , MR <sub>2</sub>	Master Reset (Clear) Inputs	0.5 U.L.	0.25 U.L.
MS <sub>1</sub> , MS <sub>2</sub>	Master Set (Preset-9, LS90) Inputs	0.5 U.L.	0.25 U.L.
Q <sub>0</sub>	Output from $\div 2$ Section (Notes b & c)	10 U.L.	5 (2.5) U.L.
Q <sub>1</sub> , Q <sub>2</sub> , Q <sub>3</sub>	Outputs from $\div 5$ (LS90), $\div 6$ (LS92), $\div 8$ (LS93) Sections (Note b)	10 U.L.	5 (2.5) U.L.

## NOTES:

- 1 TTL Unit Load (U.L.) = 40  $\mu$ A HIGH/1.6 mA LOW.
- The Output LOW drive factor is 2.5 U.L. for Military, (54) and 5 U.L. for commercial (74) Temperature Ranges.
- The Q<sub>0</sub> Outputs are guaranteed to drive the full fan-out plus the  $\overline{CP}_1$  input of the device.
- To insure proper operation the rise ( $t_r$ ) and fall time ( $t_f$ ) of the clock must be less than 100 ns.

### FUNCTIONAL DESCRIPTION

The LS90, LS92, and LS93 are 4-bit ripple type Decade, Divide-By-Twelve, and Binary Counters respectively. Each device consists of four master/slave flip-flops which are internally connected to provide a divide-by-two section and a divide-by-five (LS90), divide-by-six (LS92), or divide-by-eight (LS93) section. Each section has a separate clock input which initiates state changes of the counter on the HIGH-to-LOW clock transition. State changes of the Q outputs do not occur simultaneously because of internal ripple delays. Therefore, decoded output signals are subject to decoding spikes and should not be used for clocks or strobes. The  $Q_0$  output of each device is designed and specified to drive the rated fan-out plus the  $\overline{CP}_1$  input of the device.

A gated AND asynchronous Master Reset ( $MR_1 \bullet MR_2$ ) is provided on all counters which overrides and clocks and resets (clears) all the flip-flops. A gated AND asynchronous Master Set ( $MS_1 \bullet MS_2$ ) is provided on the LS90 which overrides the clocks and the MR inputs and sets the outputs to nine (HLLH).

Since the output from the divide-by-two section is not internally connected to the succeeding stages, the devices may be operated in various counting modes.

#### LS90

- A. BCD Decade (8421) Counter — The  $\overline{CP}_1$  input must be externally connected to the  $Q_0$  output. The  $\overline{CP}_0$  input receives the incoming count and a BCD count sequence is produced.
- B. Symmetrical Bi-quinary Divide-By-Ten Counter — The  $Q_3$  output must be externally connected to the  $\overline{CP}_0$  input. The input count is then applied to the  $\overline{CP}_1$  input and a divide-by-ten square wave is obtained at output  $Q_0$ .

- C. Divide-By-Two and Divide-By-Five Counter — No external interconnections are required. The first flip-flop is used as a binary element for the divide-by-two function ( $\overline{CP}_0$  as the input and  $Q_0$  as the output). The  $\overline{CP}_1$  input is used to obtain binary divide-by-five operation at the  $Q_3$  output.

#### LS92

- A. Modulo 12, Divide-By-Twelve Counter — The  $\overline{CP}_1$  input must be externally connected to the  $Q_0$  output. The  $\overline{CP}_0$  input receives the incoming count and  $Q_3$  produces a symmetrical divide-by-twelve square wave output.
- B. Divide-By-Two and Divide-By-Six Counter — No external interconnections are required. The first flip-flop is used as a binary element for the divide-by-two function. The  $\overline{CP}_1$  input is used to obtain divide-by-three operation at the  $Q_1$  and  $Q_2$  outputs and divide-by-six operation at the  $Q_3$  output.

#### LS93

- A. 4-Bit Ripple Counter — The output  $Q_0$  must be externally connected to input  $\overline{CP}_1$ . The input count pulses are applied to input  $\overline{CP}_0$ . Simultaneous divisions of 2, 4, 8, and 16 are performed at the  $Q_0$ ,  $Q_1$ ,  $Q_2$ , and  $Q_3$  outputs as shown in the truth table.
- B. 3-Bit Ripple Counter — The input count pulses are applied to input  $\overline{CP}_1$ . Simultaneous frequency divisions of 2, 4, and 8 are available at the  $Q_1$ ,  $Q_2$ , and  $Q_3$  outputs. Independent use of the first flip-flop is available if the reset function coincides with reset of the 3-bit ripple-through counter.
