About this Calendar

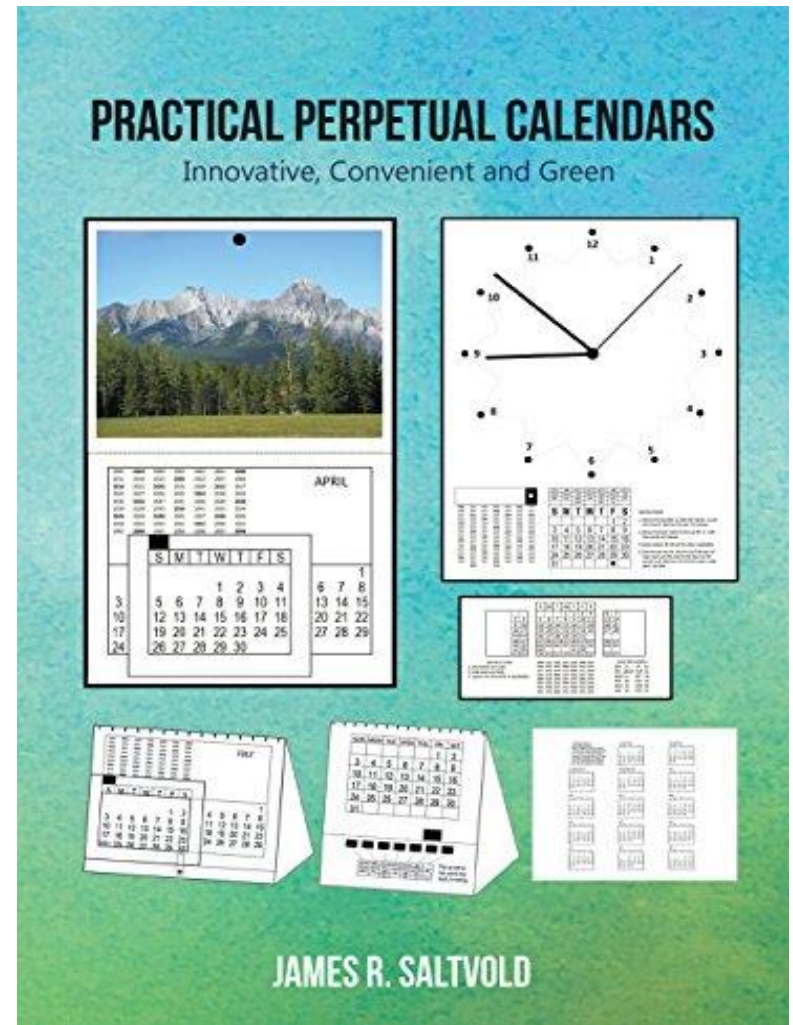

This calendar uses concepts from the book "Practical Perpetual Calendars - Innovative, Convenient and Green" by James R. Saltvold. This book is available free of charge online at <https://archive.org/details/9781532021367PdfOfBook> and can be purchased from most book dealers or via the website www.jamessaltvold.com.

How to Use this Calendar

1. Turn the sheet to the month of January.
2. Move the window so that the marker is centered under the column that has the year of interest.
3. Repeat steps 1 and 2 for the months February to December.
4. In common years ignore February 29.
5. Note that Leap years are in **bold** in the year tables. In common years, the years are in the same column for all month. In leap years, the years are in a different column for January and February than for the other months.

How the Year Tables are Made

Imagine that the columns are labeled Saturday to Sunday from left to right. For all months, common years are in the column corresponding to the day of the week that January 1 falls on. For January and February, leap years are also in the column corresponding to the day of the week that January 1 falls on. For March to December, leap years are in the column corresponding to the day of the week *after* the day of the week that January 1 falls on.

In a comprehensive how-to manual, James Saltvold shares valuable insight on how to use his unique concepts to make practical perpetual calendars for everyday home and office use. These calendars, which save resources and look like a conventional calendar, can be set to display any month for any year within their range. They are set by simply moving a slider, and typically have a range of 50 to 100 years.
