What is the process that you want to occur	How can this process fail?	What is the effect of that failure?	How Severe is the effect to the custom er?	What causes the process to go wrong?	How often does cause or FM occur?	What aspects of your process were created to address these potential failures?	How well can you detect the Cause or the Failure Mode?		What are the actions for reducing the occurrence of the cause, or improving detection?	Who is Responsible for the recommended action?	Note the actions taken. Include dates of completion.
