

# Notched Beam Component Types and Dimensions

There are four kinds of components; Beams (**Bx**), Gables (**Gx**), Halves (**Hx**), and Awnings (**Ax,y**). Halves are just Beams split in half. Awnings are made from Beams where the top is beveled  $\frac{1}{4}$ " down from the upper notch to 1" up from the end. (Except when  $x = y$ . Then make the beam 1" longer on the awning side.)
