Tooth Fairy Pillow Sewing Pattern

Materials:

White fleece cotton fabric for tooth
Felt or fleece cotton fabric for mini tooth pocket in whatever color desired
Black embroidery floss and needle for tooth face
Hot glue gun (optional)

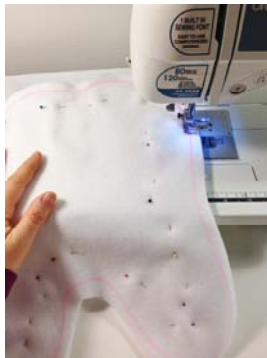

Cut all pattern pieces from pattern pages. Tooth pillow pattern prints on multiple pages and needs to be taped together. Match up the letters and use them as a guide when taping together. Tape along the dashed lines.

Using a pencil or mark-b-gone pen, trace the tooth pattern on double layered white fleece fabric and cut leaving a 1/4" seam. Note, pattern does not include the seam. Be sure to trace on the wrong side of the fabric.

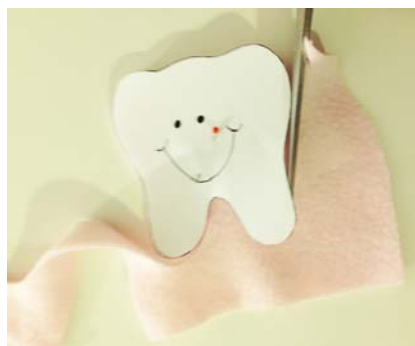

With fabric right sides together, stitch the pieces leaving an opening to reverse and stuff.

Reverse right side out.

Pin tooth packet pattern to single layered fleece or felt fabric and cut leaving no seams.

Create the face on the tooth pocket.

First, mark the outline of the eyes and smile onto the tooth pocket fabric. Tip: poke holes along the smile and at the point of the eye on the paper pattern using a large needle. Place the paper pattern on the fabric and mark a tiny dot through each hole using a pencil.

Backstitch the mouth with embroidery floss.

Stitch in the eyes.

Hot glue or stitch the tooth pocket to the center of the tooth pillow leaving the top open.

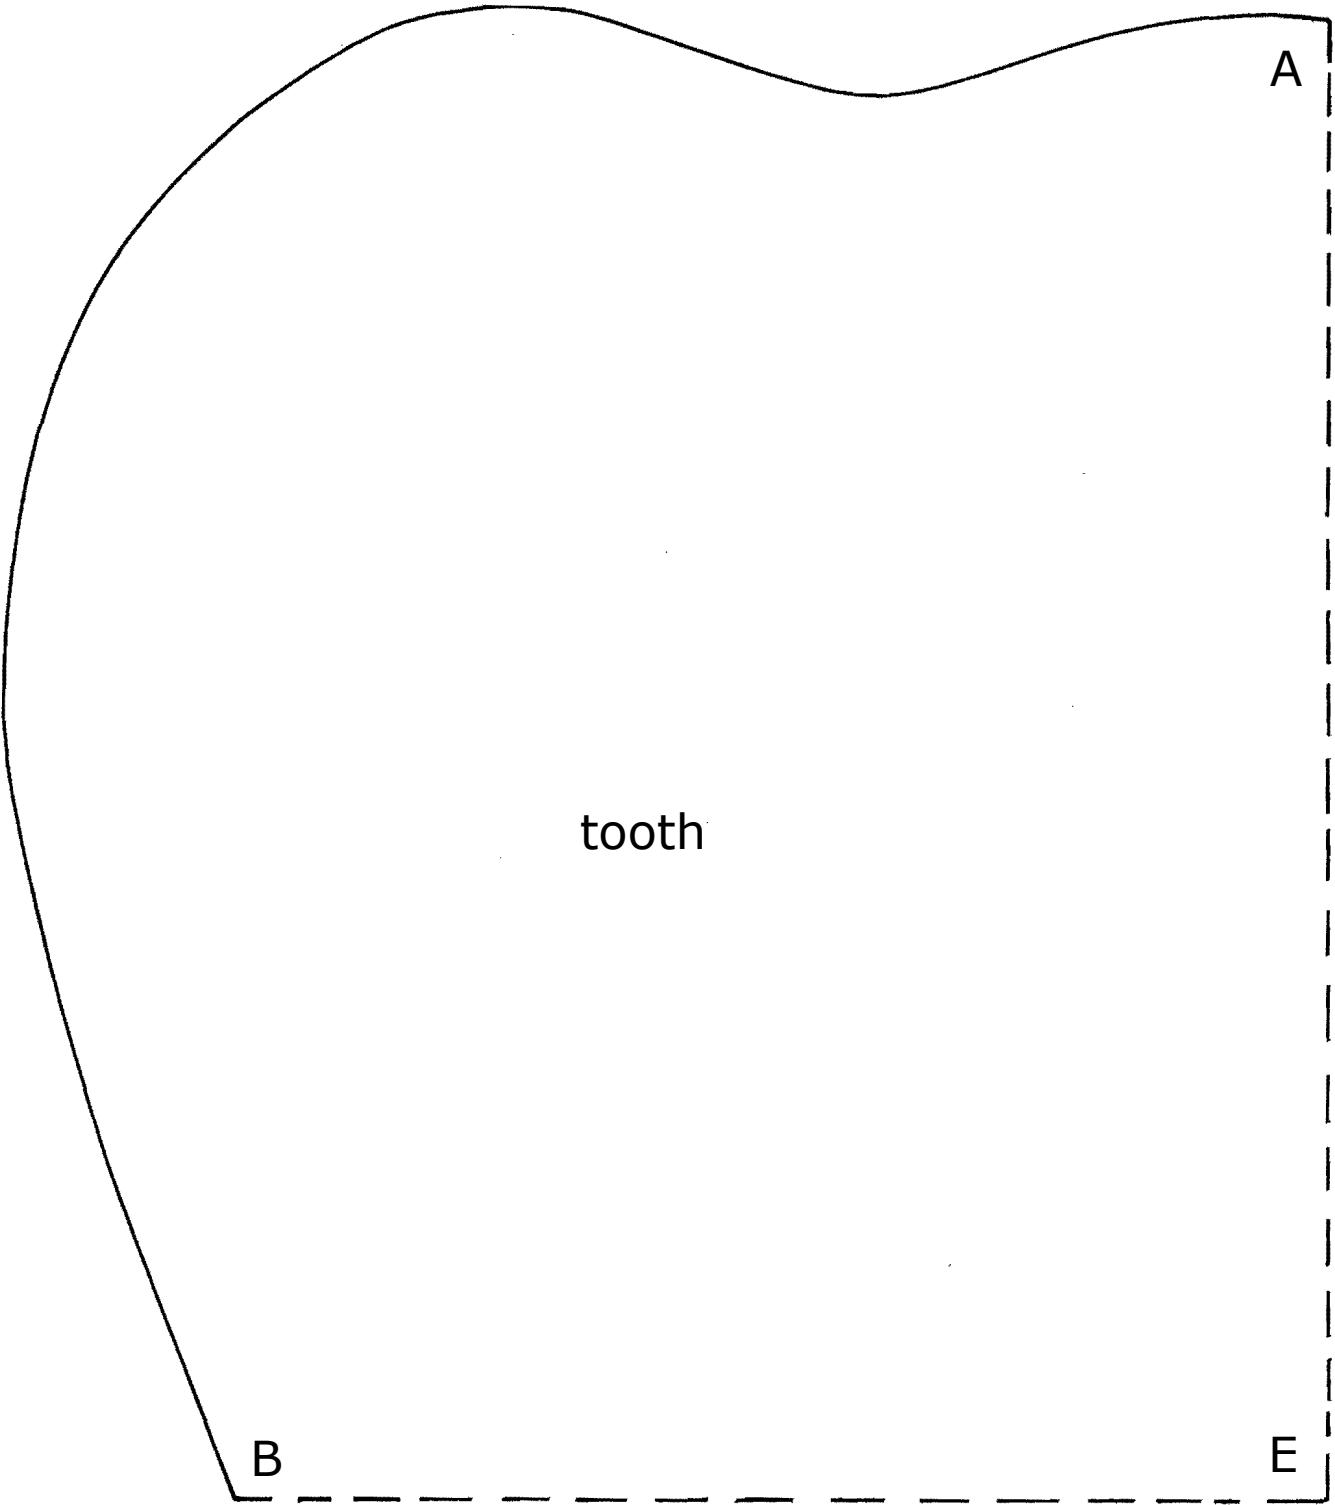

Stuff with polyester stuffing.

Stitch the opening closed.

Your tooth pillow is ready for the tooth fairy! Have your child leave their tooth inside the tooth pocket and replace it with their tooth fairy funds!
