Power: None required

Size: 3.5"H x 6"W x 6.3"D (8.9 x 15.2 x 16 cm)

Weight: 1.5 lb. (0.7 lb.)

The 10-Mbps ABC Manual Switch is a simple way for two PCs to share one Ethernet connection. Or a single PC can switch between two different 10BASE-T networks. You switch quickly and efficiently and never need to plug and unplug cables. With a quick turn of the switch, you get instant access to your 10BASE-T network.

The switch is quick and easy to install—just plug your twisted-pair Ethernet cable right into the RJ-45 connections on the back of the switch. And because the switch is nonpowered, you don't even need a nearby power outlet.

Once the switch is installed, it provides smooth, reliable switching from the rotary knob on the front.

The switch is transparent to all data.

Technically Speaking

You'll prevent costly system downtime when you specify a Black Box Data Switch. All of our Data Switches are made from the finest components to work reliably—providing you with years of trouble-free service. With computer-system time costing hundreds of dollars an hour, our high-quality switches pay for themselves over and over again.

We've done everything we can to make sure the switch you buy today will still be performing reliably well into the 21st century.

The 10-Mbps ABC Manual Switch features three RJ-45 Ethernet-compatible connectors.
