

Energy Card

On the ground:

1 energy card = Ice

(you are frozen solid, stand 6 ft from another water molecule and stay in one place)

2 energy cards = Liquid Water

(walk around slowly, but staying within arm's length of another water molecule)

3 energy cards = Liquid Water

(you're warming up, walk around fast, but stay within arm's length of another water molecule)

4 energy cards = Water Vapor

(when you get your 4th energy card, you can evaporate and turn into a gas! Fly up to the clouds!)

In the clouds:

4 energy cards = Water Vapor

(stay a gas, walk around quickly)

2 energy cards = Liquid Water

(walk around and find other water droplets, then stay within arm's length of them. When you have collected three or more molecules, fall to the ground as a raindrop.)

1 energy card = Ice

(walk around and find other frozen water molecules and move around together. When you have collected three or more molecules, fall to the ground as snow!)

Energy Card

On the ground:

1 energy card = Ice

(you are frozen solid, stand 6 ft from another water molecule and stay in one place)

2 energy cards = Liquid Water
