

CHALLENGE : COASTER

COASTER BODY DESIGN - TOP VIEW

Directions: Before you can manufacture the styra-foam blank for your roller coaster vehicle, you must complete a 3-view drawing of what you are planning. Use the grid and outline of the K'nex Mark II Chassis to accurately create your drawings. This means that all of your drawings should be life size. Use a ruler to make sure your drawing meet the minimum requirements highlighted on the activity sheets in your binder. You must dimension your drawings (label your measurements as shown in the upper right corner).
